BILL NO. S-87-06-26

SPECIAL ORDINANCE NO. S-173-87

AN ORDINANCE approving the awarding of Reference #1286, by the City of Fort Wayne, Indiana, by and through its Department of Purchasing and B and B Fertilizer Company for the Department of Parks and Recreation.

NOW, THEREFORE, BE IT ORDAINED BY THE COMMON COUNCIL OF THE CITY OF FORT WAYNE, INDIANA:

SECTION 1. That Reference #1286, between the City of Fort Wayne, by and through its Department of Purchasing and B and B Fertilizer Company for the Department of Parks and Recreation for:

> The purchase of fertilizer for the Fort Wayne Parks and Recreation Department, through the specifications in Reference #1286;

involving a total cost of Fifteen Thousand Thirty-Six and No/100 Dollars ($15,036.00+/-), all as more particularly set forth in said Reference #1286, which is on file in the Office of the Department of Purchasing, and is by reference incorporated herein, made a part hereof, and is hereby in all things ratified, confirmed and approved.

SECTION 2. That this Ordinance shall be in full force and effect from and after its passage and any and all necessary approval by the Mayor.

CAUTION Keep Out of Reach of Children

Precautionary Statements
Hazards to Humans and Domestic Animals

CAUTION

Harmful if swallowed. Avoid contact with skin, eyes, or clothing. Wash thoroughly after handling. In case of contact, flush eyes with water for 15 minutes; for skin, wash with plenty of soap and water. Get medical attention if irritation persists.

STATEMENTS OF PRACTICAL TREATMENT

If in eyes, flush with plenty of water. **If on skin,** wash with soap and hot water.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to fish and wildlife. Keep out of lakes, streams and ponds. Do not contaminate water by cleaning of equipment or disposal of wastes.

SPECIMEN LABEL

STORAGE AND DISPOSAL

Storage: Store in original container only. In case of spill, contain material and dispose as waste.

Pesticide Disposal: Do not contaminate water, food, or feed by storage and disposal. Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

Container Disposal: Completely empty bag into application equipment. Then dispose of empty bag in a sanitary landfill or by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

Storage: Do not store adjacent to or near proximity of foodstuffs, drugs, feeds or any other material intended for consumption by humans or animals. Do not store adjacent to toys, cosmetics, dishes, furniture or clothing. Do not store next to insecticides or fungicides. Protect from rain and moisture. Store in a cool, well ventilated place.

GENERAL INFORMATION

LESCO 20-5-10 Fertilizer with Dacthal is a 4.6% granular formulation for use as a pre-emergence application for control of crabgrass and other annual grasses and certain broadleaved weeds on mineral soils. LESCO 20-5-10 Fertilizer with Dacthal is recommended for use on turf, home flower gardens and nursery stock.

For control of grasses and some broadleaved weed species, such as smooth and large crabgrass, green foxtail, yellow foxtail, lovegrass, witchgrass, carpetweed, common chickweed, lambsquarters, purslane and Florida pusley, LESCO 20-5-10 Fertilizer with Dacthal is recommended at 175 to 195 pounds per acre. A slightly higher rate of application (up to 228 pounds per acre) of this product may be required for control of barnyardgrass, ground cherry, dodder, browntop, panicum, goosegrass, johnsongrass from seed, redroot pigweed, nodding spurge, spotted spurge and prostrate spurge. A rate of 326 pounds per acre is recommended for control of annual bluegrass in turf. When LESCO 20-5-10 Fertilizer with Dacthal is used at the recommended rate, up to 3 months weed control can be expected. Bermudagrass, johnsongrass established from rhizomes, nutsedge, galinsoga, wild mustard, ragweed, smartweed and velvetleaf have not been effectively controlled with LESCO 20-5-10 Fertilizer with Dacthal.

Application should be made to a uniform weed-free soil surface within two to three days maximum following cultivation to prevent subsurface germinating weeds from becoming established. Disturbing the soil surface following application will reduce effectiveness. Rates of application can be reduced by banding. Lawn spreaders should be properly calibrated prior to use to deliver LESCO 20-5-10 Fertilizer with Dacthal granules at prescribed rate. Settings may vary between spreaders because of condition and other factors.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Ornamental Turf: Apply uniformly to established turfgrass at the rate of 228 pounds per acre in the early spring before crabgrass and other annual grasses and broadleaved weed seeds germinate. Crabgrass seed germination usually coincides with the time Forsythia blossoms start to fall. One application applied in early spring before weed seed germination usually provides seasonal control. In areas which commonly experience stands of late-germinating crabgrass and other annual weedy grasses, a second application at half the regular rate can be safely made two months after the first application. In order to control annual bluegrass (Poa annua) and other erratic or late-germinating grasses and weeds in northern states, a late summer or early fall application before weed seed germination of 326 pounds per acre of LESCO 20-5-10 Fertilizer with Dacthal should supplement the early spring application. Earlier applications are required in southern United States. Consult Agricultural Experiment Station or Extension Service weed specialist for date Poa annua seeds germinate in your area and make application at least two weeks prior to this date.

Early spring application of LESCO 20-5-10 Fertilizer with Dacthal may be made to new turfgrass seedlings after the grasses have exhibited a uniform greening of the newly sprouted grass, preferably when 1 to 2 inches in height.

Where some spring seeding is necessary, there should be a delay of approximately 60 days after the application of most pre-emergence herbicides, including LESCO 20-5-10 Fertilizer with Dacthal. This delay increases the survival of desirable grasses. Fall seeding of permanent grasses can follow only a single application made either in early spring up to not less than within 60 days of seeding.

LESCO 20-5-10 Fertilizer with Dacthal is not recommended for use on putting-greens. LESCO 20-5-10 Fertilizer with Dacthal is not recommended on bentgrasses when mowed at putting-green heights. **DO NOT** apply to Dichondra.

Flower Gardens: Apply after establishment and conditions are favorable for good plant growth, or a supplemental application at the rate of 195 lbs. LESCO 20-5-10 Fertilizer with Dacthal per acre. Apply to the soil following establishment or setting out of flower beds. Where possible this should be done early in the spring. Delayed or secondary applications, when needed, can be made at any time provided beds have been cultivated and are free of weeds. Weed control up to three months or more may be expected following proper application. See list of ornamentals.

Nursery Stock or Ornamental Plantings: Apply at lining-out, late fall or early spring at the rate of 195 lbs. LESCO 20-5-10 Fertilizer with Dacthal per acre. Applications should be made to soil recently cultivated to a uniform texture. These can be made immediately following lining-out of stock. With established plantings, application should be made following proper cultivation to remove existing weeds. Where possible, this should be done early in the spring. Late summer applications may prove beneficial for control of fall-germinating weeds, if made following cultivation. Weed control up to three months or more may be expected following proper application. LESCO 20-5-10 Fertilizer with Dacthal is specifically recommended for weed control on the following nursery and ornamental plantings:

Abelia	Cuphea	Ivy, English	Poker plant
Ageratum	Cypress	Ivy, Wilson	Poplar
Alyssum	Dahlia	Juniper	Privet

DO NOT use on the following plants:

Bugleweed	Germander	Pansy	Sweet William
Button pink	Mesembry-anthemum	Phlox	Tetanthera
Carnation			
Geum			

RESEEDING

Any material that provides effective control of annual grasses may affect new lawn grass seedlings which germinate after treatment. Proper fertilization and watering will encourage the existing turf grass to fill in the thin or bare spots formerly occupied by crabgrass.

Do not reseed within four months after application. Renovate the area to be reseeded by raking thoroughly to scarify the soil surface. Where practical, mix peat in with the soil to provide an optimum seed bed.

If rate per acre is	Rate/1000 sq. ft.	Dacthal ai/acre	Actual Nitrogen per 1000 sq. ft.
175 lbs. per acre	4.0 lbs.	8.0 lbs.	0.80 lbs.
195 lbs. per acre	4.5 lbs.	9.0 lbs.	0.90 lbs.
228 lbs. per acre	5.2 lbs.	10.5 lbs.	1.00 lbs.
326 lbs. per acre	7.5 lbs.	15.0 lbs.	1.50 lbs.

DIGEST SHEET

TITLE OF ORDINANCE: SPECIAL

DEPARTMENT REQUESTING ORDINANCE: PURCHASING

SYNOPSIS OF ORDINANCE:

An ordinance approving the award of Reference #1286 with respect to the purchase of fertilizer for the Fort Wayne Parks Department through the specifications in that reference.

D-87-06-26

EFFECT OF PASSAGE:

Award will provide purchase of the necessary fertilizers for an effective and efficient turf management program for the City golf courses, parks and horticulture displays.

EFFECT OF NON-PASSAGE:

If appropriate fertilizers are not available and used, golf courses, park areas and horticulture displays are suseptable to injury and disease and efficiency of good turf management practices is minimized.

MONEY INVOLVED (direct costs, expenditures, savings):

B and B Fertilizer $ 15,036.00 +/-

ASSIGNED TO COMMITTEE (President):
